(Qt::AlignmentFlag)

Qt::BackgroundRole 8 The background brush used for items rendered with the default delegate.

(QBrush)

Qt::BackgroundColorRole 8 This role is obsolete. Use BackgroundRole instead.

Qt::ForegroundRole 9 The foreground brush (text color, typically) used for items rendered with

the default delegate. (QBrush)

Qt::TextColorRole 9 This role is obsolete. Use ForegroundRole instead.

Qt::CheckStateRole 10 This role is used to obtain the checked state of an item. (Qt::CheckState)
Qt::InitialSortOrderRole 14 This role is used to obtain the initial sort order of a header view section.

(Qt::SortOrder). This role was introduced in Qt 4.8.

Accessibility roles (with associated types):

Constant ValueDescription

Qt::AccessibleTextRole 11 The text to be used by accessibility extensions and plugins, such as

screen readers. (QString)

Qt::AccessibleDescriptionRole 12 A description of the item for accessibility purposes. (QString)

User roles:

Constant ValueDescription

Qt::UserRole 32 The first role that can be used for application-specific purposes.

For user roles, it is up to the developer to decide which types to use and ensure that components use the correct types when accessing and setting data.

enum Qt::ItemFlag flags Qt::ItemFlags

This enum describes the properties of an item:

Constant ValueDescription

Qt::NoltemFlags 0 It does not have any properties set.

Qt::ItemIsSelectable 1 It can be selected.
Qt::ItemIsEditable 2 It can be edited.
Qt::ItemIsDragEnabled 4 It can be dragged.

Qt::ItemIsDropEnabled 8 It can be used as a drop target.

Qt::ItemIsUserCheckable 16 It can be checked or unchecked by the user.

Qt::ItemIsEnabled 32 The user can interact with the item.

Qt::ItemIsTristate 64 The item is checkable with three separate states.

Note that checkable items need to be given both a suitable set of flags and an initial state, indicating whether the item is checked or not. This is handled automatically for model/view components, but needs to be explicitly set for instances of QListWidgetItem, QTableWidgetItem, and QTreeWidgetItem.

The ItemFlags type is a typedef for QFlags<ItemFlag>. It stores an OR combination of ItemFlag values.

See also QAbstractItemModel.

## enum Qt::ItemSelectionMode

This enum is used in QGraphicsItem, QGraphicsScene and QGraphicsView to specify how items are selected, or how to determine if a shapes and items collide.

Constant ValueDescription

Qt::ContainsItemShape 0x0 The output list contains only items whose shape is fully contained

inside the selection area. Items that intersect with the area's

outline are not included.

Qt::IntersectsItemShape 0x1 The output list contains both items whose shape is fully contained

inside the selection area, and items that intersect with the area's outline. This is a common mode for rubber band selection.

Qt::ContainsItemBoundingRect 0x2 The output list contains only items whose bounding rectangle is

fully contained inside the selection area. Items that intersect with

the area's outline are not included.

Qt::IntersectsItemBoundingRect 0x3 The output list contains both items whose bounding rectangle is

fully contained inside the selection area, and items that intersect with the area's outline. This method is commonly used for

determining areas that need redrawing

See also QGraphicsScene::items(), QGraphicsScene::collidingItems(), QGraphicsView::items(), QGraphicsItem::collidesWithItem(), and QGraphicsItem::collidesWithPath().

## enum Qt::Key

The key names used by Qt.

Constant Value Description

 Qt::Key\_Escape
 0x01000000

 Qt::Key\_Tab
 0x01000001

 Qt::Key\_Backtab
 0x01000002

 Qt::Key\_Backspace
 0x01000003

 Qt::Key\_Return
 0x01000004

Qt::Key\_Enter 0x01000005 Typically located on the keypad.

```
Qt::Key Pause
                                0x01000008 The Pause/Break key (Note: Not anything to do with
                                            pausing media)
Qt::Key_Print
                                0x01000009
Qt::Key SysReq
                                0x0100000a
Qt::Key_Clear
                                0x0100000b
Qt::Key_Home
                                0x01000010
Qt::Key End
                                0x01000011
Qt::Key_Left
                                0x01000012
Qt::Key_Up
                                0x01000013
Qt::Key Right
                                0x01000014
Qt::Key_Down
                                0x01000015
Qt::Key_PageUp
                                0x01000016
Qt::Key_PageDown
                                0x01000017
Qt::Key_Shift
                                0x01000020
Qt::Key_Control
                                0x01000021 On Mac OS X, this corresponds to the Command keys.
Qt::Key_Meta
                                0x01000022 On Mac OS X, this corresponds to the Control keys.
                                            On Windows keyboards, this key is mapped to the
                                            Windows kev.
Qt::Key Alt
                                0x01000023
                                0x01001103 On Windows, when the KeyDown event for this key is
Qt::Key_AltGr
                                            sent. the Ctrl+Alt modifiers are also set.
Qt::Key CapsLock
                                0x01000024
Qt::Key_NumLock
                                0x01000025
Qt::Key_ScrollLock
                                0x01000026
Qt::Key_F1
                                0x01000030
Qt::Key_F2
                                0x01000031
Qt::Key_F3
                                0x01000032
Qt::Key_F4
                                0x01000033
Qt::Key_F5
                                0x01000034
Qt::Key_F6
                                0x01000035
Qt::Key_F7
                                0x01000036
Qt::Key_F8
                                0x01000037
Qt::Key_F9
                                0x01000038
Qt::Key_F10
                                0x01000039
Qt::Key F11
                                0x0100003a
